Making it Easy for Clients to Go Green and Save Green

Altius IT makes it easy for organizations to purchase value-based services that are easy on the environment and easy on their checkbooks.

The Green Assessment Checklist

For client's who want to go green or who are practicing sustainable procurement of goods and services, Altius IT offer's the following checklist to help client's make smart choices:

- ✓ **Does the auditor use energy-saving best practices?** 100% of Altius IT's services are created using energy saving best practices.
- ✓ **How much of a client's energy resources are used?** Since the majority of our work is conducted offsite – we are able to minimize our impact on your energy usage, your resources and your people.
- ✓ **Does the auditor use energy efficient equipment?** 100% of the equipment we use is designated energy efficient – minimizing our impact on the environment and minimizing our carbon footprint.
- ✓ **Do green services have a direct cost-benefit to the client?** The direct cost-benefit of green services to our clients comes from Altius IT's energy usage efficiencies. We've developed our services to be as energy efficient as possible, saving our clients a minimum of \$1500 on direct energy usage costs.

**The more energy we save,
the less impact we have on our environment**

Eco-friendly Assessments

We are working hard to create environmentally friendly services that meet the needs of our clients. At Altius IT, we pride ourselves on providing best-in-class services that are green – saving our client's money while saving the environment. All because it's the right thing to do for our community, our clients and our business.

How do we do it?

- **Minimized energy usage** – Altius IT has customized our computer usage so that energy usage is adjusted according to the specific tasks performed during our assessment.
- **Energy-saving equipment** – Altius IT employees use laptops with energy saving systems that meet energy consumption requirements. Altius IT's laptops consume five times less energy than a traditional desktop PC. Our duo laptop technology is twice as fast as previous versions, yet consumes 28 percent less power.
- **Energy-saving best practices** – Our staff uses energy saving best practices such as screen savers, replacing in-house CRT monitors with LCD technology, etc. These steps provide a combined power savings of up to 70%.
- **Reduction of hazardous waste** – Altius IT's laptops are smaller than desktops so there is less of an environmental impact at the time of disposal. Our systems reduce the amounts of lead, cadmium, mercury, hexavalent chromium, and other toxic substances.

Helping Clients & the Environment

Altius IT is committed to the social, environmental and economic well-being of the global community in which our clients and team members live and work.

This commitment reflects a conscious, company-wide dedication to constant innovation and improvement in everything we do. We use resources responsibly, eliminate waste, and develop services that minimize harm to the environment, such as reducing energy usage at client locations by conducting some work off-site. Altius IT helps protect and preserve earth's resources by promoting new technology, investment, and awareness in our community while directly reducing the carbon dioxide being emitted into the atmosphere.

Altius IT is "carbon neutral", offsetting our carbon footprint by partnering with Standard Carbon and investing in solutions that reduce greenhouse gases.
